

AXIS EQUITY SAVINGS FUND

An open ended scheme investing in equity, arbitrage and debt
(Formerly known as Axis Equity Saver Fund)

About the Fund

Axis Equity Savings Fund is an all in one portfolio solution investing in equity, arbitrage and debt. The fund endeavors to generate capital appreciation and income distribution by investing in all 3 categories.

Actively managed diversified portfolio - Unhedged Equity - 20-45%

Advantage of market inefficiencies - Hedged Equity - 20-60%

High quality portfolio - Debt - 20-35%

#The above framework is broadly indicative and the fund manager may change the framework depending on the market conditions

Why invest in Axis Equity Savings Fund?

- Multi-asset strategy helps in portfolio diversification
- Combining asset classes with low or negative correlation reduces investment risk and captures potential upside
- Gives a balance of mix asset classes while maintaining equity taxation attributes
- Emphasis on quality portfolio

Investment approach

- **Equity** - The fund follows a large cap biased strategy. The emphasis is on quality stocks with sustainable growth potential. It endeavors to add value to investor's returns.
- **Arbitrage** - The arbitrage portion of the fund aims at giving a regular income and stable returns to the portfolio. It is relatively less volatile than equity.
- **Fixed Income** - The fund uses an active investment strategy that aims to generate stable returns with the endeavour to capture interest rate cycles by dynamically managing the funds duration. The portfolio is a mix of G-secs and high quality corporate bonds. It aims to provide stability to the portfolio and limit the downside.

Fund Manager Views

- India's exposure to global conflicts remains largely indirect and manageable. Periods of geopolitical stress typically result in higher crude prices with short-term currency and equity market volatility. Hence, while corporates will face intermittent direct or indirect impact, the country today is far better positioned to absorb such shocks. Strong foreign exchange reserves, a more resilient external balance sheet, and a credible monetary policy framework provide buffers to overcome these challenges beyond the short term shocks. The Reserve Bank of India has consistently demonstrated its ability to maintain financial stability by looking through temporary, event-driven inflation pressures and ensuring adequate system liquidity when required. These anchors have helped prevent short-term volatility from turning into lasting macro stress.
- We maintain an overweight stance on consumption and capex while making slight changes in the portfolio to cushion the risk from prolonging of current geopolitical shock and possible aftermath. The positive impact of GST rationalisation did play out with strong festive season data reporting, but inflation and supply-chain disruption are key lookout factors for consumption trend ahead. We remain constructive on healthcare, pharmaceuticals, banks and auto-ancillary names.
- The fund strategy remains focused on absolute return opportunities with a bias toward large caps, domestic consumption, and manufacturing-led growth, while maintaining an underweight stance in global-facing and defensive sectors. On the debt side, since February 2025, we have been steadily reducing portfolio duration, shifting away from long-duration strategies toward accrual-focused approaches. In this context, a barbell strategy emerges as the most effective approach—balancing short-tenor bonds for liquidity with long-duration bonds for tactical opportunities.
- Our preferred positioning includes 2-year AA-rated corporate bonds for steady accrual and long-tenor government securities for duration plays, offering a combination of consistent accrual and potential upside.

Portfolio Update

(27th February 2026)

EQUITY PORTION

Large Cap	77.44%
Midcap	8.54%
Smallcap	14.02%

FIXED INCOME PORTION

Residual Maturity	3.32 years	Mod Duration	2.53 years
Annualized Portfolio YTM ^{^*}	6.87 %	Macaulay Duration	2.64 years

[^]The yield to maturity given above is based on the debt portfolio of funds as on date given above. This should not be taken as an indication of the returns that may be generated by the fund and the securities bought by the fund may or may not be held till their respective maturities. The calculations are based on the invested corpus. *In case of semi annual YTM, it will be annualised.
