

AXIS EQUITY SAVINGS FUND

An open ended scheme investing in equity, arbitrage and debt (Formerly known as Axis Equity Saver Fund)

About the Fund

Axis Equity Savings Fund is an all in one portfolio solution investing in equity, arbitrage and debt. The fund endeavors to generate capital appreciation and income distribution by investing in all 3 categories.

Actively managed diversified portfolio - Unhedged Equity - 20-45%

Advantage of market inefficiencies – Hedged Equity – 20-60%

High quality portfolio – Debt – 20-35%

#The above framework is broadly indicative and the fund manager may change the framework depending on the

Why invest in Axis Equity Savings Fund?

- Multi-asset strategy helps in portfolio diversification
- Combining asset classes with low or negative correlation reduces investment risk and captures potential upside
- Gives a balance of mix asset classes while maintaining equity taxation attributes
- Emphasis on quality portfolio

Investment approach

- **> Equity -** The fund follows a large cap biased strategy. The emphasis is on quality stocks with sustainable growth potential. It endeavors to add value to investor's returns.
- Arbitrage The arbitrage portion of the fund aims at giving a regular income and stable returns to the portfolio. It is relatively less volatile than equity.
- ➤ Fixed Income The fund uses an active investment strategy that aims to generate stable returns with the endeavour to capture interest rate cycles by dynamically managing the funds duration. The portfolio is a mix of G-secs and high quality corporate bonds. It aims to provide stability to the portfolio and limit the downside.

Fund Manager Views

- Moderating pace of corporate earnings downtrend along with Indian equity market underperformance to global peers sets up benign market expectations with a more rational valuation premium to other EMs. With global growth hinging on unprecedented level of geopolitical tensions and tariff ambiguity, the Indian government's policy measures are likely to act as consumption recovery enablers and aid the economy. GST rationalization overhaul, income tax relief, benign inflation environment, easing interest-rate cycle and conducive credit growth policies bode well for revitalizing consumption
- > The fund is positioned to gain from pick-up in domestic consumption trend, steady healthcare spends and focus domestic capex investment and services themes. The scheme maintains a high allocation to the large cap segment with a dynamic allocation to the mid and small cap segment.
- > On the debt side, we believe that there is a clear demand-supply mismatch in longer GSecs/SDLs and hence longer end assets should be used for tactical trading purposes whenever valuation becomes attractive. The demand-supply imbalance could increase pressure on yields, especially in long-duration segments.
- We have been adding 2-5 year corporate bonds to the portfolio as we expect banking liquidity to remain surplus & lower supply of corporate bonds due to credit slowdown to aid bond yields.

 Incrementally short bonds can outperform long bonds from risk-reward perspective due to a shallow rate cut cycle, surplus banking liquidity & lower OMO purchases in the second half of the year.

Portfolio Update

(31st October 2025)

EQUITY PORTION

Large Cap	70.42%
Midcap	8.79%
Smallcap	20.79%

FIXED INCOME PORTION

Residual Maturity 5.37 years

Mod Duration 3.66 years
