

AXIS MULTI ASSET ALLOCATION FUND

Formerly known as Axis Triple Advantage Fund

An open ended scheme investing in Equity, Debt, Exchange Traded Commodity Derivatives / Units of Gold ETFs / Silver ETFs & units of REITs/InvITs

About the Fund

Axis Multi Asset Allocation Fund takes exposure to multiple asset classes.

The fund seeks to benefit from the concept of asset allocation. The aim of asset allocation is to improve risk adjusted returns through diversification across various asset classes which have low correlation with each other.

Equity
Long term growth
- 65-80% of the portfolio

Debt
Regular income, lower risk compared to equity - 10-30% of the portfolio

Commodities
Support against macro/event risk - 10-30% of the portfolio

REITs & InvITs
Regular income and capital appreciation 0-10% of the portfolio

*The above framework is broadly indicative and the fund manager may change the framework depending on the market conditions

Why Invest in Axis Multi Asset Allocation Fund?

- Provides diversification across asset classes thereby reducing risk from single asset.
- Equity focuses on the long term wealth creation, Debt generates regular income at lower volatility and commodities acts as a hedge in the portfolio against any macro event.
- Follows regular rebalancing approach within each asset class which allows investors to "buy-low sell-high".
- Offers lower transaction cost through portfolio rebalancing process.

Source : Internal

Investment approach

- **Equity:** Clear long term large cap focus with significant portion of equity portfolio invested in **core holdings with high growth and ROE numbers.**
- Follows bottom-up stock selection process with a 2-3 year perspective
- **Fixed Income :** **Actively Managed and diversified portfolio** of high quality debt and money market instruments to generate regular income.
- **Commodities** have historically had a low correlation to other asset classes. By extension exposure to commodities results in diversification benefits for investor portfolios. The fund endeavors to use gold ETFs, Silver ETFs & ETCDs to achieve twin objectives of portfolio diversification and income generation in the context of the overall fund.

Fund Manager Views

- Valuations to EM is at Long term average. Rationalize GST rates could potentially boost demand for certain consumption items with low fiscal impact. The Consumption recovery & credit pickup could give comfort on earnings outlook
- We are dynamically managing equity levels considering the impact of tariff and GST. Going forward, we will continue to dynamically evaluate net equity levels based on earnings/valuations, domestic macros, and global developments.
- On the debt side, The sell-off has pushed bond yields, particularly for government bonds, back to levels seen before the recent rate-cut cycle began. There's a possibility of a 15-25 bps rally in long duration bonds in the near term.
- We have gradually reduced duration in our portfolios since February 2025 transitioning from long duration strategies to accrual-based strategies. We have been adding 2-5 year corporate bonds to the portfolio as we expect surplus banking liquidity, lower supply of corporate bonds/ CDs due to slowdown and delay in implementation of LCR guidelines and attractive spreads and valuations. Incrementally short bonds can outperform long bonds from risk-reward perspective due to a shallow rate cut cycle, lower OMO purchases in the second half of the year and a shift in focus to Govt Debt to GDP targets.
- Gold continues its uptrend amidst geopolitical tensions and central bank buying, indirectly boosting silver's appeal. Dollar Index Softness - A weaker US dollar typically benefits commodities like silver, making it more attractive globally. Long term view remains positive with some volatility expected due to global cues.

Portfolio Update

(30th September 2025)

EQUITY PORTION

Large Cap 66.73%

Midcap 16.18%

Smallcap 17.09%

FIXED INCOME PORTION

Residual Maturity 4.42 years

Mod Duration 3.06 years

Annualized Portfolio YTM ^{^*} 7.00 %

Macaulay Duration 3.21 years

[^]The yield to maturity given above is based on the debt portfolio of funds as on date given above. This should not be taken as an indication of the returns that may be generated by the fund and the securities bought by the fund may or may not be held till their respective maturities. The calculations are based on the invested corpus. *In case of semi annual YTM, it will be annualised.
