

AXIS RETIREMENT FUND - CONSERVATIVE PLAN

An open-ended retirement solution oriented scheme having a lock-in of 5 years or till retirement age (whichever is earlier)

(Formerly known as Axis Retirement Savings Fund - Conservative Plan)

About the Fund

The fund aims to help investors with their retirement planning. A moderately high risk fund suitable for an investment horizon of more than 2 years. Brings stability to your portfolio by investing primarily in fixed income instruments. Offers the potential for capital growth through limited exposure to equity instruments.

Conservative Plan

Ideal for investors about to enter their retirement years

40-80% debt exposure in high quality debt instruments, 20-40% in Equity exposure.

Default retirement age: 58 years. Please refer to SID for detailed investment strategy and asset allocation

*Other asset classes include Debt & Money Market Instruments, Gold ETF and InVITs.

*The above framework is broadly indicative and the fund manager may change the framework depending on the market conditions

Why combine debt and equity?

- Equity and debt markets act counter cyclically to each other over long investment cycles.
- The risk of losing money over 1 year is much higher for equity than debt
- A combined portfolio benefits from growth potential of equity but cuts down the risk of losses due to cushion from debt.
 - Potential for higher return than debt funds
 - Lower risk of losing money as often as a pure equity oriented scheme

Data: ACE MF, Axis MF Research.

Note: Equity refers to Nifty 50. Debt refers to I-SEC Sovereign Bond Index.

Fund Manger Views

- ▶ India's exposure to global conflicts remains largely indirect and manageable. Periods of geopolitical stress typically result in higher crude prices and short-term currency volatility, but the country today is far better positioned to absorb such shocks. Strong foreign exchange reserves, a more resilient external balance sheet, and a credible monetary policy framework provide important buffers. The Reserve Bank of India has consistently demonstrated its ability to maintain financial stability by looking through temporary, event-driven inflation pressures and ensuring adequate system liquidity when required. These anchors have helped prevent short-term volatility from turning into lasting macro stress.
- ▶ From a valuation and earnings perspective, the recent correction has made markets more attractive. Valuations have become more compelling, earnings expectations have improved, economic momentum is picking up, and domestic inflows remain supportive.
- ▶ The fund is predominantly focused on large caps in sectors such as Banks, NBFC, Power, Telecom
- ▶ On the investment side, increased government allocations to defence, railways, power, steel and roads bode well for demand across capex-intensive sectors. Our portfolios are positioned to benefit from this multi-year investment cycle.
- ▶ On the Debt side, Since February 2025, we have been steadily reducing portfolio duration, shifting away from long-duration strategies toward accrual-focused approaches. This year, we see accrual and selective tactical duration as the dominant themes, particularly in long bonds and state development loans (SDLs).
- ▶ In this context, a barbell strategy emerges as the most effective approach—balancing short-tenor bonds for liquidity with long-duration bonds for tactical opportunities.
- ▶ Our preferred positioning includes 2-year AA-rated corporate bonds for steady accrual and long-tenor government securities for duration plays, offering a combination of consistent accrual and potential upside.
