

# Market Up ho ya Down apna balance sahi hai!

Presenting

## Axis Balanced Advantage Fund

(An open-ended Dynamic Asset Allocation Fund)

### About the Fund

The fund follows a dynamic approach to asset allocation by using a systematic rule based model which dynamically adjusts its equity allocation over time.

The fund uses an in house proprietary process run by the fund manager which helps it determine equity exposure

Equity - 0-100%  
Fixed Income - 0-100%

Difference between net equity and debt exposure is achieved through hedging

Valuations, Earnings momentum, Trend & macros determine net equity and debt exposure

\*The above framework is broadly indicative and the fund manager may change the framework depending on the market conditions

### 3 Pillar Investment Approach

#### Dynamic approach

The funds dynamic approach aims to navigate equity market volatility and capture long term performance.

### Current Portfolio Strategy

Axis Balanced Advantage fund follows a 5-factor approach to determine equity exposure while rebalancing. The key factors are Valuation, Earnings momentum, Global/domestic macros, Trend and Global events. All 5 variables are given importance while computing the net long exposure.

Please refer to SID for detailed asset allocation and Investment Strategy. Subject to provisions of SIP, portfolio Allocation/ Positioning will be based on the prevailing market conditions and may change depending on the fund manager's view. For equity high quality implies companies with sound management pedigree and a track record to manage business in all economic cycles and good corporate governance.

### Fund Manager Views

- Over the last one-year, Indian equities delivered muted single digit returns. The primary drag came from reciprocal tariffs imposed by the US, where India faced the steepest levies among the affected nations. Further elevated valuations and cyclical earnings growth slowdown also affected returns. Persistent foreign portfolio outflows fuelled volatility, while robust inflows from domestic institutional investors helped cushion the impact and stabilize markets.
- CY2025 was a year of stimulus aimed to revive growth and cushion the impact of global uncertainties. Coordinated policy measures from the RBI and the government—rate cuts, CRR reduction, liquidity infusion, accelerated capex and nearly Rs1.5 trn in GST reductions aimed at boosting mass consumption. With these measures, the earnings cycle seems to have bottomed out, with signs of a sustained recovery ahead.
- Overall, we believe that market is currently in a consolidation phase, with selected pockets of opportunity. While the view on equity allocation has been cautious so far, favourable policy actions by the Government and steady improvement in macro parameters have led to steady increase in equity allocation. We continue to prefer large-cap exposure. We look for relative risk-reward with focus on companies with good earnings visibility and reasonable valuations, within sectors such as Banks, Healthcare, NBFC, Power Utilities and T&D, Consumer discretionary, Telecom, Retail.Global linked sectors such as IT is also expected to post a gradual recovery as and when global macro headwinds recede through the year
- On the debt side, we have gradually reduced duration in our portfolios since February 2025 transitioning from long duration strategies to accrual-based strategies. In this context, a barbell strategy emerges as the most effective approach—balancing short-tenor bonds for liquidity with long-duration bonds for tactical opportunities. Our preferred positioning includes 2-year AA-rated corporate bonds for steady accrual and long-tenor government securities for duration plays, offering a combination of consistent accrual and potential upside

## Strategic agility: dynamic approach

## Portfolio Update (30th January 2026)

### EQUITY PORTION

Large Cap	88.88%
Midcap	5.25%
Smallcap	5.87%

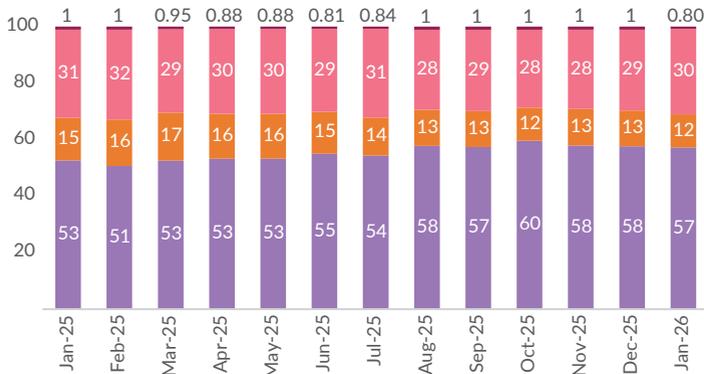

### FIXED INCOME PORTION

Residual Maturity	3.6 years
Mod Duration	2.7 years
Annualized Portfolio YTM <sup>^</sup>	7.04%
