I. INTRODUCTION

A. Risk Factors

i. Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Re. 1 lac made by it towards setting up the Fund.
- The present Scheme is not a guaranteed or assured return Scheme.

ii. Scheme Specific Risk Factors

Risks associated with Investment in Exchange Traded Funds

The Scheme are subject to the principal risks described below. Some or all of these risks may adversely affect Scheme's NAV, trading price, yield, total return and/or its ability to meet its objectives. These risks are associated with investment in debt securities.

Market Risk

The Scheme's NAV will react to the market movements. The Investor could lose money over short periods due to fluctuation in the Scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in stock prices and market movements, and over longer periods during market downturns.

Regulatory Risk:

Any changes in trading regulations by the stock exchange (s) or SEBI may affect the ability of Authorised Participant to arbitrage resulting into wider premium/ discount to NAV.

Liquidity Risk

Trading in units of Axis AAA Bond Plus SDL ETF - 2026 Maturity on the Exchange may be halted because of market conditions or for reasons that in the view of the Market Authorities or SEBI, trading in units of the Scheme are not advisable. In addition, trading in units of Axis AAA Bond Plus SDL ETF - 2026 Maturity are subject to trading halts caused by extraordinary market volatility and pursuant to NSE and SEBI "circuit filter" rules. There can be no assurance that the requirements of the Market necessary to maintain the listing of units of Axis AAA Bond Plus SDL ETF - 2026 Maturity will continue to be met or will remain unchanged.

Settlement Risk:

In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the Schemes portfolio may result, at times, in potential losses to the Scheme, and there can be a subsequent decline in the value of the securities held in the respective Scheme's portfolio

Passive Investments

Axis AAA Bond Plus SDL ETF - 2026 Maturity will be a passively managed scheme by providing exposure to Nifty AAA Bond Plus SDL Apr 2026 50:50 Index and tracking its performance and yield, before expenses, as closely as possible. The Scheme performance may be affected by a general decline in the Indian markets relating to its underlying Index. The Scheme invests in the underlying Index regardless of its investment merit.

Risks associated with investments in Fixed Income Securities

The following are the risks associated with investment in fixed income securities:

Interest-Rate Risk: Fixed income securities such as government bonds, Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Liquidity Risk: The liquidity of money market instruments may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the instrument. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Credit Risk: This is the risk associated with the issuer of a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV

Risk associated with Listing of units on Stock Exchange

Listing of the units of the fund does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.

Trading in Units of the Scheme on the Exchange may be halted because of market conditions or for reasons that in view of Exchange Authorities or SEBI, trading in Units of the Scheme is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the Scheme will continue to be met or will remain unchanged. Any changes in trading regulations by the Stock Exchange(s) or SEBI may inter-alia result in wider premium/ discount to NAV. The Units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of Scheme's holdings. The trading prices of Units of the Scheme will

fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the Scheme. However, the Units of the Scheme can be subscribed / redeemed in Creation Unit Size directly with the Scheme, which provides efficient arbitrage between the traded prices and the NAV, thereby reducing the incidence of the units of the Scheme being traded at premium/discounts to NAV. However, any changes in the trading regulations by NSE/Stock Exchange/SEBI may affect the ability of the market makers/Authorized Participants to arbitrage resulting into wider premium or discount to NAV. The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Mutual Fund will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.

The market price of the Units of the Scheme, like any other listed security, is largely dependent on two factors, viz., (1) the intrinsic value of the Unit (or NAV), and (2) demand and supply of Units in the market. Sizeable demand or supply of the Units in the Exchange may lead to market price of the Units to quote at premium or discount to NAV.

Risk associated with Redemption

Investors may note that even though this is an open-ended scheme, the Scheme would repurchase/redeem Units in Creation Unit Size only. Thus unit holdings less than the Creation Unit Size can only be sold through the secondary market on the Stock Exchange where these units are listed, subject to the rules and regulations of the Exchange.

Risks associated with segregated portfolio

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.
3. Listing of units of segregated portfolio on recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The provisions of SEBI Circular No. SEBI/IMD/CIR No. 10/22701/03 dated December 12, 2003, with respect to minimum number of investors and no single investor shall account for more than 25% of the corpus of the Scheme are not applicable to exchange traded funds and hence do not apply to Axis AAA Bond Plus SDL ETF - 2026 Maturity.

E. WHAT ARE THE INVESTMENT STRATEGIES?

Axis AAA Bond Plus SDL ETF - 2026 Maturity is a passively managed exchange traded fund which will employ an investment approach designed to track the performance of Nifty AAA Bond Plus SDL Apr 2026 50:50 Index.

The Scheme will follow Buy and Hold investment strategy in which debt instruments by AAA rated corporate borrowers & state development loans will be held till maturity unless sold for meeting redemptions/rebalancing.

The Scheme shall replicate the index completely. In case the Scheme is not able to replicate the index the Fund Manager may invest in other issuances within the limits specified and subject to conditions laid down by SEBI circular dated November 29, 2019 as amended from time to time.

During normal circumstances, the Scheme's exposure to money market instruments will be in line with the asset allocation table. However, in case of maturity of instruments in the Scheme portfolio, the reinvestment will be in line with the index methodology.

Portfolio Turnover:

The Scheme being an open ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis by Authorized Participants and Large investors. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

Risk Control:

The fund will be passively managed to track the performance of the Nifty AAA Bond Plus SDL Apr 2026 50:50 Index. The fund will endeavor to achieve its objective by replicating the index basket as closely as possible. However, in the event such replication is not feasible, the fund will deploy assets in line with the SEBI circular no. SEBI/HO/IMD/DF3/CIR/P/2019/147 dated November 29, 2019. The securities selected by the investment team of the AMC will undergo rigorous in depth credit evaluation of the instruments (other than G-Secs) proposed to be invested in. The credit evaluation will essentially be a bottom up approach and include a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term / long term financial health of the issuer.

The AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process, which would be periodically evaluated. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has implemented the Bloomberg Portfolio Order Management System as Front Office System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same and acts in a preventive manner.

TRACKING ERROR

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as delay in purchase or non-availability of underlying securities forming part of the index, the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory restrictions, which may result in Tracking Error with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible. Under normal circumstances, the AMC shall endeavor that the Tracking Error of the Scheme shall not exceed 2% per annum. There can be no assurance or guarantee that the Scheme will achieve any particular level of Tracking Error relative to performance of the underlying Index. Tracking Error may arise due to the following reasons:

1. Delay in purchase or non-availability of underlying securities forming part of the index.
2. Delay in liquidation of securities which have been removed by the Index.
3. Difference in valuation of underlying securities by the Index Provider and AMC's valuation providers.
4. Expenditure incurred by the Fund.
5. Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise.
6. Securities trading may halt temporarily due to circuit filters.
7. Corporate actions such as debenture or warrant conversion, rights issuances, mergers, change in constituents etc.
8. Rounding-off of the quantity of securities/shares in the underlying index.
9. Interest payout.
10. Index providers undertake a periodical review of the securities/scripts that comprise the underlying index and may either drop or include new securities/scripts.

In such an event, the Fund will try to reallocate its portfolio but the available investment/reinvestment opportunity may not permit absolute mirroring immediately. SEBI Regulations (if any)

may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.

F. INVESTMENT BY THE AMC IN THE SCHEME

The AMC may invest in the Scheme on an ongoing basis. In addition the AMC may purchase units of the Scheme directly from the Stock Exchange(s) after the Units are listed on the Stock Exchange, subject to the SEBI (MF) Regulations. As per the existing SEBI (MF) Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

- Each state that is part of the SDL component (constituting 50% of index) is given equal weight as of the base date of the index
- Subsequently, the weights may drift due to price movement
- Any coupon amount received is assumed to be reinvested in the portfolio on the same date, in the proportion of the existing weights

Index Rebalancing/Reconstitution

- Index will be reviewed at the end of each calendar quarter
- In case there is a breach of 15% in weight of any issuer, excess weight will be redistributed in rest of the portfolio proportionally
- Based on the governments 'in principle approval' to disinvest its stake in some of the government owned entities, such entities are not included to be part of the index at launch/inception of the index. On account of disinvestment in an existing constituent, such issuer shall be excluded from the index effective next rebalancing/reconstitution only if the disinvestment process has been completed
- In case an eligible issuer gets downgraded before the portfolio disclosure, such issuer shall be excluded from being a part of the index

- Apart from scheduled review, bonds of existing issuers to be excluded from the index as per the following exclusion schedule:

Scenario	Bonds to be excluded	
	On next rebalance date	Within 5 Working Days
Issuer rating is downgraded below AAA and is investment grade	-	✓
Issuer rating is downgraded below investment grade	-	✓

- Due to the above stated reasons, if the index is rebalanced and issuer/s move out of the index,
 - If the total number of AAA rated issuers in the index is 4 and above, then the total weight of the AAA rated securities being excluded will be redistributed among the remaining AAA rated securities proportionally. This will be subject to 15% issuer limit.
 - If the total number of State/UT issuers in the index is 4 and above, then the total weight of the SDLs being excluded will be redistributed among the remaining SDL securities proportionally. This will be subject to 15% issuer limit.
 - If the total number of AAA rated issuers in the index fall below 4, then new AAA rated issuers will be included in the index based on the issuer selection and bond selection criteria mentioned in the AAA rated Bonds component index methodology section above, to take the AAA rated issuer count to 4 and the total running weightage of AAA rated Bonds component will be divided based on the outstanding amount amongst all the AAA rated issuers in the index.
 - Due to any reason, if the total number of State/UT issuers in the index fall below 4, then new State/UTs will be included in the index based on the issuer selection and security selection criteria mentioned in the SDLs component index methodology section above, to take the State/UT count to 4 and the total running weightage of SDLs component will be divided equally amongst all the 4 state/UT
- Expect for above stated reasons, there will be no inclusion and exclusion in the index during the quarterly review
- If there is no inclusion or exclusion on the review date, the weights will not get reset and existing weights will continue

Index Termination

The index shall mature on April 30, 2026

INTRODUCTION TO EXCHANGE TRADED FUNDS

An ETF is a passively managed product that provides exposure to an index or a basket of securities with the objective of generating returns as close to the index as possible. The key benefit of an ETF over traditional open-ended index funds is liquidity and availability of real-time market price on stock exchange. They can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. ETFs provide investors a fund that closely tracks the performance of an index with the ability to buy/sell on an intra-day basis. ETFs are structured in a manner which allows to create new units (called creation units) and redeem outstanding units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs are usually passively managed funds wherein subscription/redemption of units work on the concept of exchange with underlying securities. In other words, large investors/institutions can purchase units by depositing the underlying securities with the mutual fund/AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange. ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the Creation/Redemption of units through the in-kind mechanism the mutual fund can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower.

Benefits of ETFs

- a) Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
- b) Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at nearly the real-time prices as opposed to end of day prices.
- c) Ability to put limit orders.
- d) Protects long-term investors from the inflows and outflows of short-term investors. This is because the fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.
- e) Flexible as it can be used as a tool for gaining instant exposure to the equity markets, equitising cash, for arbitraging between the cash and futures market.

Market for ETFs: The assets-under-management for ETFs which was approx. Rs 3,800 crores as of September 2010 has grown to over Rs. 2,25,000 crores in February 2021. The primary categories of ETFs in India are: ETFs tracking frontline indices like NIFTY 50, Sensex & NIFTY Bank. In addition, ETF's designed specifically as part of the government divestment programme like the Bharat 22 & Central Public Sector Enterprises (CPSE) continue to manage significant assets within the ETF space. In all currently the Indian ETF market consists of 80 ETF's tracking indices across Equity, debt and gold. With the guidelines for Provident Funds being liberalized, ETFs have been the preferred mode for long-term retirement funds to access the equity markets in a hassle free manner. Also, given the ETF market globally has grown significantly over the past few years, there is a strong case that the size and breadth of the ETF market has a potential go up in India in years to come.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market, consists of G-Sec outstanding of Rs. 78,05,098.221cr as on Oct 18, 2021 (State Govt securities - Rs 38,31,895.100 cr, (as on Feb'21) Source: CCIL), is the oldest and the largest component (50% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri Party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing on Oct 20, 2021 on some of the instruments and further illustrates this point.

Instrument	Current Yield range (%)
Tri-party Repo	3.25%-3.30%
Repo	3.25%-3.30%
3M T-bill	3.40%-3.45%
1Y T-bill	3.90%-3.95%
10Y G-sec	6.35%-6.40%

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

According to the FATCA-CRS Rules, financial institutions in India are required to report tax information about account holders that are tax resident of U.S. and other foreign countries, to the CBDT/ Indian Government which will, in turn, relay that information to the US Internal Revenue Service (IRS) and governments of other foreign countries.</p> <p>These developments have resulted in compliance and reporting obligations on Financial Institutions like Axis MF. FATCA-CRS provisions are relevant not only at on-boarding stage of Unit holders but also throughout the life cycle of investment with the Fund. Unit holders therefore should intimate to the Fund/the Investment Manager, any change in their status with respect to any FATCA-CRS related information /</p>
