**Portfolio rebalancing due to short term defensive considerations:**

Due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Such deviations shall normally be for a short term and defensive considerations as per Para 1.14.1.2 of Master Circular for Mutual Funds, and the fund manager will rebalance the portfolio within 7 calendar days from the date of deviation.

**Portfolio rebalancing for Passive breaches:**

In the event of deviation due to change in constituents of the index due to periodic review, in accordance with Para 3.5.3 of Master Circular for Mutual Funds as amended from time to time, the portfolio of the Scheme shall be rebalanced within 7 calendar days from the date of such deviation.

Any transactions undertaken in the scheme portfolio of the Index Fund in order to meet the redemption and subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the index is maintained at all points of time.

## **B. WHERE WILL THE SCHEME INVEST?**

The Scheme will invest in following instruments:

- Fixed Income Instruments comprising CRISIL-IBX AAA NBFC-HFC Index – Jun 2027
- Debt & Money Market instruments
- Short Term Deposits
- Units of debt and liquid Mutual Fund Schemes

The Scheme shall invest in any other instruments as may be permitted by SEBI/RBI from time to time.

Kindly refer detailed definitions and applicable regulations/guidelines for each instruments in the Section II.

## **C. WHAT ARE THE INVESTMENT STRATEGIES?**

The scheme follows a passive investment strategy.

Axis CRISIL-IBX AAA Bond NBFC-HFC – Jun 2027 Index Fund is a passively managed index fund which will employ an investment approach designed to track the performance of CRISIL- IBX AAA NBFC-HFC Index – Jun 2027.

The Scheme will follow Buy and Hold investment strategy in which debt instruments issued by NBFCs and HFCs will be held till maturity unless sold for meeting redemptions/rebalancing.

The Scheme shall replicate the index. In case the Scheme is not able to replicate the index the Fund Manager may invest in other issuances within the limits specified and subject to conditions laid down by Para 3.5 of Master Circular for Mutual Funds as amended from time to time. During normal circumstances, the Scheme's exposure to money market instruments will be in line with the asset allocation table. However, in case of maturity of instruments in the scheme portfolio, the reinvestment will be in line with the index methodology.

Pursuant to Para 3.5 of SEBI Master Circular for Mutual Funds, as amended by SEBI from time to time the scheme shall be considered to be replicating the underlying index, provided;

In case of Target Maturity Index Funds, the following norms for permissible deviation in duration shall apply:

- a) For portfolio with residual maturity of greater than 5 years: Either +/- 6 months or +/- 10% of duration, whichever is higher.
- b) For a portfolio with residual maturity of up to 5 years: Either +/- 3 months or +/- 10% of duration, whichever is higher.
- c) However, at no point of time, the residual maturity of any security forming part of the portfolio shall be beyond the target maturity date of the Index Fund.

## **PORTFOLIO TURNOVER**

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The

Scheme has no specific target relating to portfolio turnover.

### Part III. OTHER DETAILS

#### A. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. Separate NAV will be calculated and disclosed for each Option

The AMC will calculate and disclose the first NAV of the Scheme within a period of 5 business days from the date of allotment. Subsequently, the AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

#### Illustration of Computation of NAV:

The computation of NAV per unit using various components is explained as follows:

Particulars	Amount in Rs
Market or Fair Value of Scheme's Investments..... (A)	10,00,00,000.00
Add: Current Assets including Accrued Income.... (B)	75,34,345.00
Less: Current Liabilities and Provisions. .... (C)	(30,00,000.00)
Net Assets (A+B-C)	10,45,34,345.00

No. of Units outstanding under Scheme on the Valuation Day: 100,00,000

The NAV per unit will be computed as follows:  $10,45,34,345.34 / 100,00,000 = \text{Rs. } 10.4534$  per unit (rounded off to four decimals)

The Mutual Fund will ensure that the Redemption Price will not be lower than 95% of the Applicable NAV.

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI

	<b>Returns after expenses at the end of the year (in %) [(E/A) – 1]</b>	<b>13%</b>	<b>14.5%</b>

**Note(s):**

- The purpose of the above illustration is purely to explain the impact of expense ratio charged to the Plan(s) under the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan of the Scheme will be lower to the extent of the distribution expenses/commission
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to seek appropriate advice.

**D. LOAD STRUCTURE**

Load is an amount which is paid by the Investor to redeem the Units from the Scheme. This amount is used by the AMC to pay commission to the distributors and to take care of other marketing and selling expenses. Load amounts are variable and are subject to change from time to time. For the current applicable structure, investors may refer to the website of the AMC (<https://www.axismf.com/statutory-disclosures>) or may call at contact number **8108622211** (Chargeable) from 9.00 am to 6.00 pm (Monday to Saturday) or can contact his distributor.

Para 10.4 of SEBI Master Circular For Mutual Funds as amended from time to time has decided that there shall be no entry Load for all Mutual Fund Schemes.

Type of Load	Load chargeable (as %age of NAV)
<b>Exit Load</b>	For details refer Point no. XI of Part – I of Section I of the Scheme Information Document.

Units issued on reinvestment of IDCW shall not be subject to Load. No load shall be levied on switches between options and sub-options of the Scheme.

The above mentioned load structure shall be equally applicable to the special products offered under the Scheme such as SIP, SWP, etc. offered by the AMC. Further, for switches between the Growth and IDCW Option, no load will be charged by the Scheme. However, for switches between the Plans i.e. between Regular and Direct Plan or vice versa, load will be charged by the Scheme.

Exit load charged to the investors will be credited back to the Scheme net of GST. Investors are requested to check the prevailing load structure of the Scheme before investing.

For any change in load structure AMC will issue an addendum and display it on the website/ Investor

Service Centres.

Para 10.4 of SEBI Master Circular for Mutual Fund has decided that there shall be no entry Load for all Mutual Fund schemes.

Under the Scheme, the AMC/ Trustee reserves the right to change / modify the load structure if it so deem fit in the interest of smooth and efficient functioning of the Mutual Fund. The AMC/ Trustee reserves the right to introduce / modify the load depending upon the circumstances prevailing at that time subject to maximum limits as prescribed under the Regulations.

The Redemption Price however, will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

At the time of changing the Load Structure:

- 1.The AMC shall be required to issue an addendum and display the same on its website immediately;
- 2.The addendum shall be circulated to all the distributors / brokers so that the same can be attached to all Scheme Information Document and Key Information Memorandum already in stock.
- 3.Latest applicable addendum shall be a part of KIM and SID of the respective Scheme(s).

#### **E. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

The Scheme shall have a minimum of 20 Investors and no single Investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 Investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any Investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25% limit. Failure on the part of the said Investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic Redemption by the Mutual Fund at the Applicable NAV on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

## Section II

### I. Introduction

#### A. Definitions/interpretation

For details refer website of Axis Mutual Fund: <https://www.axismf.com/statutory-disclosures>

#### B. Risk factors

##### **Scheme Specific Risk Factors**

##### **Risk associated with Passive Investments Strategy**

The Scheme will be a passively managed scheme providing exposure to constituents of CRISIL-IBX AAA NBFC-HFC Index – Jun 2027 and tracking its performance and yield, before expenses, as closely as possible. The scheme performance may be affected by the vagaries of the Indian markets relating to its underlying Index. The scheme invests in the underlying Index regardless of its investment merit.

##### **Tracking Error Risk**

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as delay in purchase or non-availability of underlying securities forming part of the index, the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory restrictions, which may result in Tracking Error with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible. Tracking Error may arise due to the following reasons:

1. Delay in purchase or non-availability of underlying securities forming part of the index.
2. Delay in liquidation of securities which have been removed by the Index.
3. Difference in valuation of underlying securities by the Index Provider and AMC's valuation providers.
4. Expenditure incurred by the Fund.
5. Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise.
6. Securities trading may halt temporarily due to circuit filters.
7. Corporate actions such as debenture or warrant conversion, rights issuances, mergers, change in constituents etc.
8. Rounding-off of the quantity of securities/shares in the underlying index.
9. Interest payout.
10. Index providers undertake a periodical review of the securities/scrips that comprise the underlying index and may either drop or include new securities/scrips.

In such an event, the Fund will try to reallocate its portfolio but the available investment/ reinvestment opportunity may not permit absolute mirroring immediately. SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.

##### **Tracking difference:**

- I. Tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme shall be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 years, 5 years, 10 years and since the date of allotment of units.
- II. For the Scheme the annualized tracking difference averaged over one-year period shall not exceed 1.25%. In case the average annualized tracking difference over one-year period for the Scheme is

higher than 1.25%, the same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any.

### **Risks associated with investments in Fixed Income Securities**

The following are the risks associated with investment in fixed income securities:

**Interest-Rate Risk:** Fixed income securities such as government bonds, corporate bonds, and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

**Re-investment Risk:** Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

**Basis Risk:** The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

**Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

**Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

**Credit Risk:** This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

**Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

**Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV

### **Risks associated with Segregated Portfolio**

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.
3. Listing of units of segregated portfolio on recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

### **Risk Factors associated with repo transactions in corporate debt securities**

The Scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk is further mitigated through over-collateralization (the value of the collateral being more than the repo amount).

### **Risks associated with Securities lending**

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, to comply with the terms of agreement entered into between the lenders of securities i.e. any scheme and the approved intermediary/counterparty. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary/counterparty to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Scheme may not be able to sell such lent securities and this can lead to temporary illiquidity.

### **C. Risk mitigation strategies**

#### **RISK CONTROL**

The Scheme will be passively managed to track the performance of the CRISIL-IBX AAA NBFC-HFC Index – Jun 2027. The Scheme will endeavor to achieve its objective by replicating the index basket.

The AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process, which would be periodically evaluated. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has implemented the Bloomberg Portfolio Order Management System as Front Office System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same and acts in a preventive manner.

#### **Risk control measures**

**Market Risk / Interest Rate Risk:** Changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. The price movement up and down in fixed income securities will lead to possible movements in the NAV.

Mitigation - In a rising interest rates scenario the scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.

**Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).

Mitigation- The scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.

**Credit risk or default risk:** It refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

Mitigation- Apart from the basic examination, management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower.

**Tracking error risk:** The performance of the Scheme may not commensurate with the performance of the benchmark index on any given day or over any given period. Such variation, referred to as tracking error may impact the performance of the Scheme.

Mitigation: The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible.

## **II. Information about the scheme:**

The Fund Manager may invest in any other security as maybe permitted from time to time and which are in line with the investment objectives of the Scheme.

### **Debt and Money Markets in India**

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market, consists of G-Sec outstanding of Rs. 80,59,921.302cr as on Feb 28, 2022 (State Govt securities - Rs 38,31,895.100 cr, (as on Feb'21) Source: CCIL), is the oldest and the

largest component (50% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri Party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing on September 30, 2024 on some of the instruments and further illustrates this point.

<b>Instrument</b>	<b>Current Yield range (%)</b>
Tri-party Repo	6.50-6.60

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits

16. The Scheme shall participate in repos in corporate debt securities as per the guidelines issued by SEBI and/ or RBI from time to time and the guidelines framed by the Board of Directors of Trustee Company and the Asset Management Company, from time to time. At present the following conditions and norms shall apply to repo in corporate debt securities:

- The gross exposure of the Scheme to repo transactions in corporate debt securities shall not be more than 10 % of the net assets of the Scheme.
- The cumulative gross exposure through repo transactions in corporate debt securities along with equity and debt shall not exceed 100% of the net assets of the Scheme.
- The Scheme shall participate in repo transactions only in AA and above rated corporate debt securities.
- The Scheme shall borrow through repo transactions only if the tenor of the transaction does not exceed a period of six months.
- The Trustee and the Asset Management Company have framed guidelines interalia considering the following aspects:

- Category of counterparty
- Credit rating of counterparty
- Tenor of collateral
- Applicable haircuts

(vi) Counterparty selection & credit rating

The counterparty must be an acceptable counterparty for debt transactions. The Mutual Fund follows a counterparty empanelment process for fixed income transactions and the same shall be used for selection of counterparties for corporate bond repos. All repo transactions in corporate bonds will be governed by a repo agreement as specified by FIMMDA and / or other specified authorities.

(vii) Collateral tenor & quality

The exposure limit/investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.

(viii) Applicable haircuts

Currently mutual funds are permitted to carry out repo transactions in government securities without any haircuts. The Reserve Bank of India has notified a minimum haircut based on rating of the corporate bond and other securities. In addition, the Fixed Income and Money Market Dealers Association (FIMMDA) would maintain a rating-haircut matrix on an ongoing basis. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.

The haircuts seek to protect the lender of funds from the event of the counterparty failing to honor the repurchase leg of the repo. In such a circumstance, the Fund would suffer a loss if the value of the collateral depreciates by more than the haircut. The fall in the value of the collateral could be on account of higher yields and/ or deterioration of credit quality.

As the typical tenor of repos is short (typically overnight), the haircuts represent a relatively high degree of safety in relation to the interest rate risk on the collateral. The risk of collateral depreciation based on historical volatility is given in the table below:

Bond Tenor (yrs)	1	3	5	10
Price Volatility (%) (annualized)	0.6	1.2	1.7	3.4
Repo Tenor	Number of standard deviations needed to lose 10%			
1 day	258	136	94	48
7 days	98	52	36	18

In the above table, the price volatility of a 10-year bond is about 3.4% annualized. That is a 10% price move represents nearly a 3-sigma event on an annualized basis. For overnight tenors, this represents a 48-sigma event (for comparison a 6-sigma event occurs about once in a million observations).

It is apparent that the haircuts stipulated by RBI are more than sufficient to mitigate interest rate risk. Credit event risk remains (the collateral could default during the tenor of the repo). This risk is to be mitigated by ensuring that the collateral is acceptable from a credit point of view.

The exposure limit/ investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds.

17. Investment in Partly Paid Debenture, if undertaken, will be subject to a cap on maximum investment of Mutual Fund Scheme at 5% of the AUM of the scheme. However, once the Partly Paid Debentures are fully paid up, the cap on maximum investment of Mutual Fund Scheme at 5% of the AUM of the scheme will not apply.

The Scheme will comply with the other Regulations applicable to the investments of Mutual Funds from time to time.

All the investment restrictions will be applicable at the time of making investments.

Apart from the investment restrictions prescribed under SEBI (MF) Regulations, the fund may follow any internal norms vis-à-vis limiting exposure to a particular scrip or sector, etc.

The AMC/Trustee may alter these above stated restrictions from time to time to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments for mutual funds to achieve its respective investment objective.

<p>Tracking Error &amp; Tracking Difference</p>	<p><b>Tracking Error Risk</b></p> <p>The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as delay in purchase or non-availability of underlying securities forming part of the index, the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory restrictions, which may result in Tracking Error with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible. Tracking Error may arise due to the following reasons:</p> <ol style="list-style-type: none"> <li>1. Delay in purchase or non-availability of underlying securities forming part of the index.</li> <li>2. Delay in liquidation of securities which have been removed by the Index.</li> <li>3. Difference in valuation of underlying securities by the Index Provider and AMC's valuation providers.</li> <li>4. Expenditure incurred by the Fund.</li> <li>5. Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise.</li> <li>6. Securities trading may halt temporarily due to circuit filters.</li> <li>7. Corporate actions such as debenture or warrant conversion, rights issuances, mergers, change in constituents etc.</li> <li>8. Rounding-off of the quantity of securities/shares in the underlying index.</li> <li>9. Interest payout.</li> <li>10. Index providers undertake a periodical review of the securities/scrips that comprise the underlying index and may either drop or include new securities/scrips.</li> </ol> <p>In such an event, the Fund will try to reallocate its portfolio but the available investment/ reinvestment opportunity may not permit absolute mirroring immediately. SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.</p> <p><b><u>Tracking difference:</u></b></p> <ol style="list-style-type: none"> <li>I. Tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme shall be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 years, 5 years, 10 years and since the date of allotment of units.</li> <li>II.
